

News

Growth in both Analytical and Reporting departments continues to be fed by innovation, quality, and service. We have added staff, opened a branch office, and developed fillable eForms to further streamline business operations and to maintain turnaround. Our goals are to provide qualitative and quantitative results, that are meaningful and applicable, while addressing problems and upside potential

Restructuring the Company

We have restructured the company so David & Lizzy can focus on business development and marketing. For our Welltest Analysis department we put in place a supervisory team. Kate is our Technical Supervisor—Analysis and oversees first-line: training, technical advice, and quality control. Ken is our Project Supervisor—Analysis and is responsible for data and information management plus task assignments.

Red Deer Office Now Open

For our Technical Reporting department we put a capable supervisor in place and opened an office in Red Deer. This consolidates data reporting operations in a location that is central to Alberta's wireline, production, and surface test company infrastructure. Darla is our Project Supervisor—Reporting and organizes all incoming information and data; manages jobs; trains staff; plus checks all reports for quality control.

New Web & Bonus CD Content

Our web site and bonus CDs include new and updated content. Information Reports now include wireline testing and production testing. Presentation slides on PID tests have been updated. Fillable Adobe.pdf eForms have been developed for wireline, production, and surface test programming, as well as for sending your engineering data in for welltest analysis. Several samples of our eReports have been updated.
